## URGENT MEDIA RELEASE

### Call Out for Public Input: Investigating Potential COVID-19 Vaccine-Related Fatalities – Every Life Counts.

We are calling on families who believe their loved ones passed away within **60 days** of receiving a COVID-19 vaccine. This initiative aims to uncover potential causation and similarities in deaths that have not been identified or properly investigated by the Coroner and or the TGA.

We are receiving an increasing number of reports concerning potential vaccine-related deaths. Notably, a forensic pathologist has attributed one fatality to rapidly progressing granulomatous myocarditis following Pfizer Comirnaty COVID-19 vaccination. In another documented case, a 61-year-old male tragically passed away within 24 hours of receiving the Pfizer vaccine following employer and Government mandates.

We urge families with similar experiences to come forward, particularly where coronial investigations have been conducted or dispensed with (not investigated). Your information may assist in whether there has been patterns or correlations of other deaths during that short period of time that may be causally related but have not been attributed to the vaccine.

#### Key Conditions of Concern and investigation (*non-exhaustive*):

- Thrombosis with Thrombocytopenia Syndrome (TTS) – (Blood Clots)
- Anaphylaxis
- Myocarditis & Pericarditis
- Severe Allergic Reactions
- Cardiac Arrest
- Stroke
- Multi-Organ Failure

#### Strict Criteria Apply:

If your family has been affected, we invite you to share relevant information under strict privacy and confidentiality protocols. Your submission may help identify patterns and inform future investigations.

**We extend our deepest sympathies to all who have suffered and remain committed to truth, transparency, and justice.**

**How to Submit:** Please contact [admin@aflsolicitors.com.au](mailto:admin@aflsolicitors.com.au) for more information.
